

HAMMOND POWER SOLUTIONS RESPONSE

Hammond Power Solutions (HPS) is actively monitoring the potential impact of the Coronavirus (COVID-19) on our business and supply channels. The great majority of HPS products are built in our North American plants, which are currently unaffected by COVID-19. HPS will continue to monitor the situation and work to minimize any affects the virus may have on our product availability.

LEGRAND RESPONSE

On January 30th the World Health Organization announced that the coronavirus epidemic is considered a public health emergency on an international scale. The Chinese authorities have implemented measures to impose broad restrictions on people's movement to minimize the spread of the virus. Additionally, many other countries, airlines, and logistics entities have modified, limited, or suspended activity to the area.

Legrand wishes to point out that it does not have facilities, nor suppliers, in Hubei province, the region chiefly affected by the outbreak. However, in consideration of the health of its employees, the Legrand Group is taking all necessary measures on a daily basis, in China and elsewhere, to ensure the protection of its teams.

To date, the quality of our service has not been significantly affected by this health crisis. However, due to the prolonged travel and logistics restrictions in China, and the recent expansion of virus cases reported outside of China, we cannot rule out a potential impact on our commitments to our partners, in China and elsewhere.

In order to minimize any service disruptions resulting from the coronavirus restrictions, we are taking the following measures:

- Working with our factories to ensure a quick and orderly return to work, and the use of overtime hours to reach normal production capacity as quickly as possible
- Evaluating alternate factory locations to offset lost or reduced capacity at our Chinese factories
- Mobilizing backup suppliers, wherever possible, to supplement lost or reduced capacity from impacted suppliers
- Placing advanced orders for long lead time parts and components to reduce the risk of future supply disruptions
- Offering substitute products, where applicable, to offset product shortages
- Working closely with our factories and key suppliers to anticipate and work around potential logistics issues, including capacity shortages and port congestion

Our teams are fully mobilized to assess any potential impact to our business with you, and we remain available to you throughout this operation.

PANDUIT RESPONSE

At the moment, our facility in China is running at 80% capacity, causing only minor impacts to customer orders. We continue to stay optimistic and are not forecasting any specific products to be impacted

ILSCO RESPONSE

I wanted to acknowledge your request. We do not have a formal statement, but I have requested one and will send it to you as soon as I receive it.

With exception of the surge product, 95%+ of our connector products components and manufacturing are done here in North America.

Sorry that we did not catch up at the NAED and I hope all is well with you. I will try to catch up with you next week.

ABB RESPONSE

The health and safety of our employees, customers and partners remains our number one priority, and we are working hard to assess and mitigate any risks.

We would like to reassure you that we are adapting our operations to meet the challenges of the current situation to ensure we continue to meet your needs and maintain supply of our products and services in light of the extraordinary circumstances created by the coronavirus situation.

We very much value your cooperation with this matter. We are here to help and support you and will keep you informed of any possible impact to our deliveries. Please contact me directly if you would like to discuss any concerns you might have.

Company name. –

ABB Installation Products Inc.

Manufacturing operations in China –

ABB Installation Products Inc. does not have manufacturing operations in China.

Raw materials, component parts, or finished goods sourcing from China –

ABB Installation Products Inc. does source raw materials, component parts, or finished goods from China.

Anticipated disruption to operations, raw materials, component parts or finished goods coming from China-

ABB Installation Products Inc. does not anticipate disruptions if production at our 3rd party suppliers begins after the extended New Year.

Mitigation plan in the event of disruption -

ABB Installation Products Inc. will mitigate any potential disruption by utilization of safety stock built up ahead of the New Year for single sourced products and increasing production for multi sourced products.

Business contact in the event of disruptions in customer supply –

Jonathan Huard, jonathan.huard@ca.abb.com

Customer commitment –

ABB Installation Products Inc. is committed to serving its customers and continues to monitor the coronavirus situation and while no disruption is anticipated at this time, in the event that circumstances change, we will send appropriate notification under any applicable Force Majeure provision in an agreement or pursuant to our general terms and conditions.

BRIDGEPORT RESPONSE

Bridgeport is aware and understands Sonepar's concern about product delays resulting from the Coronavirus, and as we discussed at the NAED, we are working closely with our manufacturers in China to ensure the product we are sourcing from them is on schedule for shipment.

If any anomalies arise with products that any of your op-cos are buying from us, we will make sure to let you know as soon as we do.

SCHNEIDER RESPONSE

Meeting our customers' expectations is our key priority. Our tailored and flexible supply chain is closely monitoring and evaluating the situation in real time.

We are closely following the government regulations as we re-commence operations in most of our factories in Mainland China, and we're actively working to find a timely and effective solution for each of our customers.

Our supply chain is ready to collaborate as required on demand shaping customer solutions.

EATON RESPONSE

We will have update out this week but basically you are correct, you won't feel any real impact before April/May. We do build a few products in China but the biggest question for us is down the supply chain, supplier of a supplier type concern. So tough to give possible impacted SKUs with confidence. Our plants in China started up again week of 2/17 or before. Workforce and attendance have been ramping up since then and expected to be back at full production level later in March. Will forward you official update ASAP as well

SIGNIFY RESPONSE

As you are aware, the coronavirus (COVID-19) has spread to many countries around the world and the World Health Organization (WHO) has declared the virus a global health emergency. Our immediate thoughts are with those who are immediately impacted while we are taking all precautions to safeguard the health, safety and wellbeing of our employees, customers and business partners. As per March 2, none of our employees have been reported infected by the virus. We take the situation very seriously. A dedicated project team has been put in place to monitor, assess and prepare plans in order to minimize the impact on our business. We are in contact with our suppliers in China and continue to engage with the relevant groups so that we can act and adapt quickly to any new developments that may arise. As an international company, it is our duty to take up our responsibility in helping to contain the issue. We have implemented travel restrictions to protect our employees and customers from exposing to risks related to the spread of the coronavirus (COVID-19). This means that we could be hampered in fulfilling our performance obligations under service arrangements if travel to customer locations is disrupted. The full impact remains unclear with regards to components supply, manufacturing and transportation. In case the delivery of products and/or the fulfilment of services gets impacted, leading to suspension or delay thereof, our Sales team will contact you promptly. The virus outbreak, and the corresponding closures, slowdown and travel bans are beyond our control. We therefore have no option but to treat it as a force majeure event. The health, safety and wellbeing of our employees, customers and partners is and remains our number one priority.

GENERAC RESPONSE

We are doing our best to mitigate but there is a risk of disruption from suppliers we use for components.

SIEMENS RESPONSE

No do not anticipate anything at this time. Corporate is monitoring globally. Reaching out to suppliers in India in case we run into issues due to the coronavirus.

HUBBELL RESPONSE

Overall, Hubbell is monitoring the Coronavirus developments closely as it continues to unfold. Our factories are located outside the Coronavirus originating region of Wuhan, however movement of people and materials in China may be affected. As far as the effect on our business, the China supply chain represents a small portion of our overall production capacity and while still early, we do not at this point anticipate an immediate adverse impact. With Chinese New Year coinciding, production typically slows during this time of the year and as

a result we maintain our supply chain and inventories at elevated levels. With our current inventory positions, we do not expect supply interruptions to our customers as a result of this situation at this point. It is still early though and we are closely monitoring the situation, and we will continue to communicate and work with our teams and partners, in order to minimize the potential for disruption.

MERSEN RESPONSE

We are doing a deep dive here to analyze risk. As you know nearly all of the product that we supply to Sonepar in the US comes out of Mexico. The risk is in some of the secondary supply and some components. We are working to put something more definitive together.

SOUTHERN CONTROLS RESPONSE

I checked with our purchasing agent and sales manager, we have not received specific details from any manufacturers as of yet but we are monitoring lead times in an effort to stay out in front of potential issues

MINERALLAC RESPONSE

We placed several of our container and Mill orders in September and got them out so they are either here on the US mainland or on the water the only issue we might see is if this persists two months out it could affect the hex nuts washers and bolts but we do have domestic sources so we feel quite confident in our position right now

GREENLEE RESPONSE

Emerson Professional Tools has not released any statements of perceived risks due to the situation with the coronavirus in Asia

FLUKE RESPONSE

The only impacts we are seeing currently is related to our thermography product line. We are now experiencing some lead times upwards of 10 weeks on some products

BRADY RESPONSE

Brady does not anticipate any delays to production or fulfillment related to the impacts of the coronavirus outbreak. We are aware of the situation and are monitoring it closely. Unofficially not anticipating any impact

MILWAUKEE RESPONSE

Right now, our inventory situation is stable, but we continue to monitor everything as a fluid situation

IDEAL RESPONSE

We are monitoring the situation closely and should anything change we will be sure to communicate it appropriately. Majority of products made in the US.

LOUISVILLE RESPONSE

No issues

STELPRO RESPONSE

Additional supply chain delays. Monitoring the situation closely
