

# Effects of the COVID-19 Coronavirus on Our Supply Chain

## Honeywell Gas Analysis & Safety

March 9, 2020

Dear Valued Partners,

As you have seen or read in the news, the COVID-19 outbreak is having a substantial impact across the globe. As a result, we wanted to update you regarding the effects of COVID-19 on our supply chain.

The mandatory quarantines and a general enterprise shutdown issued by the Chinese government caused some minor delays in production and lead times. As of this week, all of Honeywell's manufacturing sites and suppliers are back online and near normal production levels.

Delivery and lead time impacts will vary by order based on inventory levels and location of manufacturing for the specific products. If you have questions about any specific product or order, please contact your Honeywell customer service representative, who will be able to provide you with the most recent updates.

**Placing orders early will help Honeywell better optimize our production and provide priority to those customers placing firm orders.** This is especially important if you have a business-critical rollout with deployment deadlines especially related to turnaround season. While we are working to accelerate capacity, there is a backlog for demand and Honeywell uses a First In, First Out order allocation. Placing your order early with Honeywell helps ensure we can support your customer requirements for Honeywell offerings.

Honeywell is committed to safety and we will do our best to keep you apprised of any future impact, to help give you visibility to better manage customers' expectations. We will continue to monitor the COVID-19 situation and will update you as necessary.

Yours sincerely,

Graham Robinson  
President
